

Health Score & Active Percentage

Complete Guide

How Aorane calculates your daily health intelligence

WHO 2020

ICMR 2024

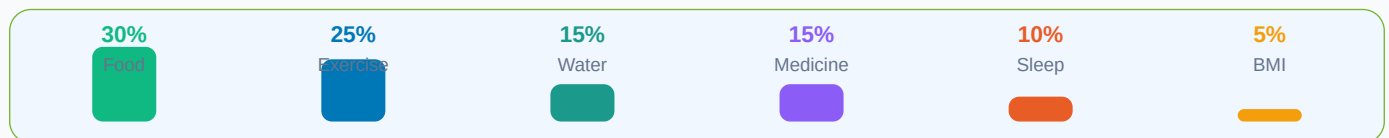

Harris-Benedict

Asia-Pacific BMI

What is Aorane Health Score?

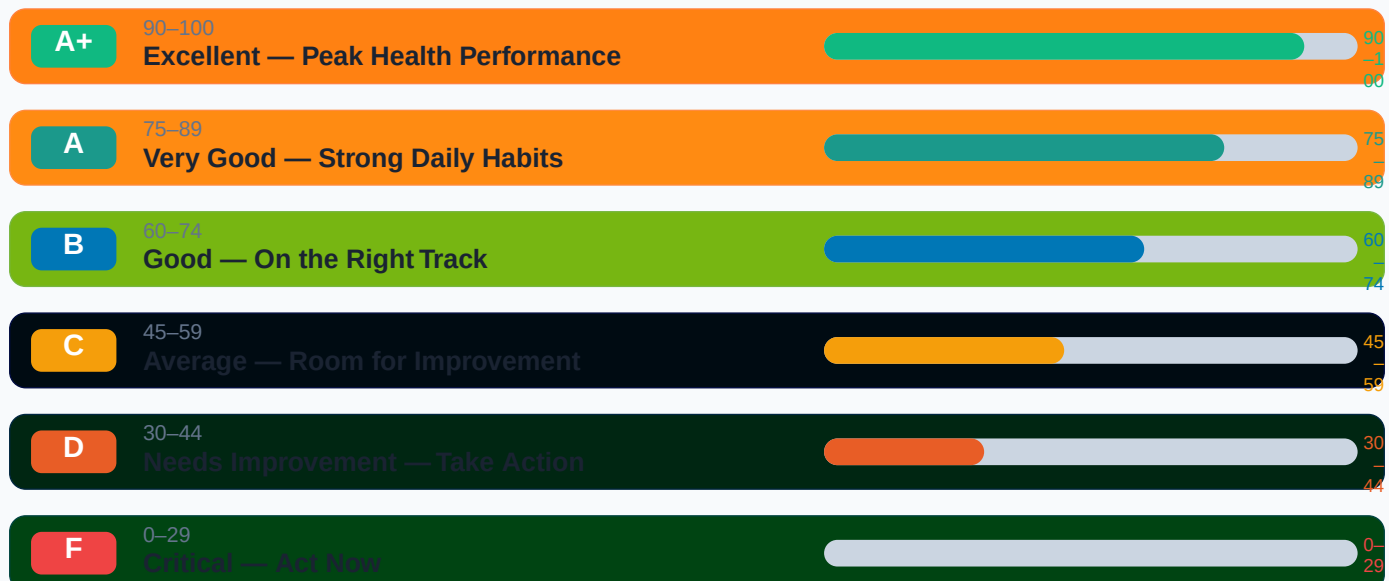

Aorane Health Score is a single number (0–100) that reflects your overall daily health status. It is computed using six scientifically validated pillars — Nutrition, Exercise, Hydration, Medicine Adherence, Sleep, and Body Wellness (BMI). Each pillar is benchmarked against WHO, ICMR, and CDC guidelines personalised to your age, gender, weight, height, goal, and health conditions.

HOW THE SCORE IS BUILT

$$\text{Score} = (\text{Food} \times 0.30) + (\text{Exercise} \times 0.25) + (\text{Water} \times 0.15) + (\text{Medicine} \times 0.15) + (\text{Sleep} \times 0.10) + (\text{BMI} \times 0.05)$$

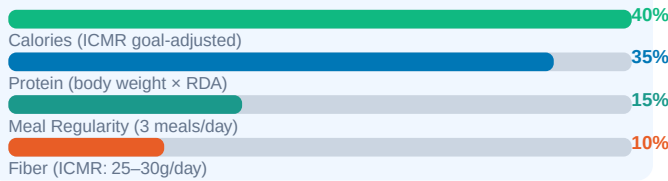

GRADE SYSTEM

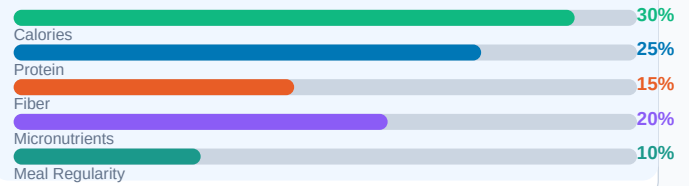

Ø>ÝW Nutrition (Food Score)

Weight: 30% · Reference: ICMR Dietary Guidelines 2024

Without Micronutrient Data

With Micronutrient Data

Ø<ß Personalised Calorie Goal (Harris-Benedict BMR)

BMR (Male) = $66 + (13.7 \times \text{weight kg}) + (5 \times \text{height cm}) - (6.8 \times \text{age})$ | BMR (Female) = $655 + (9.6 \times \text{W}) + (1.8 \times \text{H}) - (4.7 \times \text{age})$

Goal Adjustments: Weight Loss ! " 15% | Muscle Gain ! " +10% | Maintenance ! " TDEE

Ø<ß Exercise Score

Weight: 25% · Reference: WHO Physical Activity Guidelines 2020

Daily Goal: 85.7 MET-min/day (600 MET-min/week)

Score = (Actual MET-min ÷ 85.7) × 100 [capped at 100]

MET values are assigned per exercise type and intensity. Higher intensity activities earn more MET-minutes per minute.

Ø=Ü§ Hydration (Water Score)

Weight: 15% · Reference: WHO/ICMR Hydration Guidelines

Men (Sedentary)

2500 ml

Score = Actual ÷ Goal × 100

Women (Sedentary)

2000 ml

Score = Actual ÷ Goal × 100

Moderately Active

+250 ml

Score = Actual ÷ Goal × 100

Very Active / Athlete

+500 ml

Score = Actual ÷ Goal × 100

Ø=ÜŠ Medicine Adherence

Weight: 15% · Reference: WHO Adherence to Long-Term Therapies

Score = (Medicines Taken ÷ Medicines Scheduled) × 100

If no medicines are scheduled ! " Score defaults to 75 (neutral, does not penalise non-medicated users).

Ø=Þ4 Sleep Score

Weight: 10% · Reference: CDC/WHO Sleep Guidelines

What is Active Percentage?

Measures your daily app engagement and health tracking consistency

Active Percentage tells you HOW CONSISTENTLY you are tracking your health each day. Unlike Health Score (which measures quality), Active % measures quantity — how many health categories you logged today vs. what was possible.

It tracks 4 activity categories

Food Log

Water Log

Exercise Log

Medicine Log

THREE ACTIVE % METRICS YOU SEE IN THE APP

THIS WEEK %

Average normalized_pct of last 7 days

Shows how active you've been this week. Displayed as the main badge on your Scorecard card. Updates every day as you log.

TODAY %

Today's normalized_pct from daily_activity_scores

How much health data have you logged today? Resets every midnight IST. Logs in any category increase this immediately.

OVERALL %

AVG of all days where app_opened = true

Your lifetime consistency score — cumulative average across all days you have used Aorane. Reflects your long-term habit strength.

Trend Detection:

Improving

! This Week % is ≥5 pts higher than last week

Declining

! This Week % is ≥5 pts lower than last week | Stable ! difference <5 pts

Micronutrient Score (Inside Food Score)

Composite of 5 key nutrients · Reference: ICMR RDA 2020 + WHO

Iron

30%

Male: 17mg | Female: 21mg | Anemia: 30mg

Calcium

25%

Adults: 600mg | Elderly: 800mg | Osteoporosis: 1000mg

Vitamin B12

20%

2.4 mcg/day (WHO RDA — especially important for vegetarians)

Vitamin C

15%

40 mg/day (ICMR RDA)

Vitamin D

10%

10 mcg/day adults > 15 mcg elderly 60

Formula: $(\text{Iron} \times 0.30) + (\text{Calcium} \times 0.25) + (\text{B12} \times 0.20) + (\text{Vit C} \times 0.15) + (\text{Vit D} \times 0.10) = \text{Micronutrient Composite Score}$

How Does This Help You?

Real benefits of tracking your Aorane Health Score every day

Personalised Targets

Your calorie goal, protein RDA, fiber target, and micronutrient needs are all calculated based on YOUR body — not generic averages. The same food gives different scores to different users based on their weight, age, and goal.

Early Warning System

A declining Health Score or Active % trend alerts you before small habits turn into serious health issues. The Grade F (Critical) triggers urgent recommendations to act immediately.

Motivation Through Scores

Seeing your score improve day-by-day creates a powerful motivation loop. The This Week % badge on your card shows your recent consistency at a glance, encouraging you to maintain streaks.

Scientific Benchmarking

Every metric is compared against WHO 2020, ICMR 2024, and CDC guidelines. You are not just 'tracking data' — you are being evaluated against the same standards used by global health organisations.

Condition-Aware Scoring

If you have diabetes, your fiber goal is raised to 35g. If you are anaemic, iron target doubles. If you are elderly, protein and vitamin D targets increase. Your health conditions directly shape your score.

Trend Visibility

The 7-day vs 14-day comparison shows if your habits are Improving, Stable, or Declining. This gives you actionable insight to course-correct before a bad week becomes a bad month.
