Project Overview & Vision

What is Aorane?

Aorane is a comprehensive Indian health-tech platform that empowers individuals to track, understand, and improve their health using AI. The platform serves three key audiences: individual consumers (via a mobile app), organizations like corporates, hospitals, gyms, and clinics (via a Business Portal/CRM), and the Aorane operations team (via an Admin Panel). The backend is a shared Express.js API server connected to a PostgreSQL database hosted on Supabase, deployed on Render.

Vision Statement

"To make personalized, AI-powered healthcare accessible to every Indian — in their language, on their phone, at their fingertips."

Core Value Propositions

AI-First Health Tracking

Photo-based food scanning, medical report AI analysis, personalized diet plans using NVIDIA LLaMA & Google Gemini 2.0 Flash Vision

AORANE ID Health Passport

Unique 12-digit immutable health identity for every user — tracks BMI, health grade, and medical history across providers

Multi-Language Support

Hindi, English (Hinglish) and extensible to regional Indian languages — built-in translation tables

Family Health Management

Up to 4 family members under one Family Plan with shared health dashboard

Blood Donation Network

Emergency blood request system connecting donors and recipients in real-time

Enterprise Wellness SaaS

B2B platform for organizations to provide health benefits to employees/members with analytics dashboard

Accident Emergency SOS

GPS-based accident detection with automated emergency contact alerts

Wearable Integration

Google Fit connectivity for automatic step count and activity sync

System Architecture

Architecture Overview — Monorepo (pnpm Workspaces)

The entire platform is organized as a single pnpm monorepo. All artifacts share the same codebase, and inter-package dependencies are resolved via workspace: references. Shared libraries (DB, API types, Zod schemas) live in /lib and are consumed by all artifact packages.

CLIENT LAYER

📱 Mobile App
(Expo/React Native)

🏢 Business Portal
(React + Vite)

👤 Admin Panel
(React + Vite)

🌐 Landing Page
(React + Vite)

API LAYER — Express.js v5 | Node.js | TypeScript | Pino Logging

26 Route Modules | JWT Auth Middleware | Rate Limiting | CORS | Helmet Security | Production: <https://aorane.onrender.com>

+ Drizzle ORM +

DATA LAYER — Supabase PostgreSQL (32 Tables, Connection Pooling)

Users & Auth | Health Tracking | Food DB | Revenue | Business | Community | Platform | Wearable

+ External Integrations +

EXTERNAL SERVICES

🧠 NVIDIA LLaMA 3.3 | 🗣️ Google Gemini 2.0 Flash | 💳 Razorpay Payments | ✉️ Resend Email | 📞 Fast2SMS OTP | 🏃 Fitbit Google Fit API

Package Structure

Package	Description
artifacts/aorane-mobile	Expo mobile app — user-facing health tracking, AI scan, payment
artifacts/business-portal	React+Vite B2B CRM for organizations
artifacts/admin-panel	React+Vite internal ops panel for Aorane team
artifacts/aorane-landing	React+Vite marketing/landing page
artifacts/api-server	Express.js REST API — shared backend for all clients
lib/db	Drizzle ORM schema + DB client (shared across all packages)
lib/api-spec	OpenAPI/Swagger spec + Orval codegen config
lib/api-zod	Auto-generated Zod validation schemas from OpenAPI spec
lib/api-client-react	Auto-generated TanStack Query React hooks from OpenAPI spec

Complete Technology Stack

📱 Mobile App (artifacts/aorane-mobile)

Framework — Expo 52 (SDK 52)

+ React Native + Expo Router
Language — TypeScript (strict
file-based routing)

UI Components — Custom

components, Ionicons, @expo/
State Management — React
vector-icons, LinearGradient

Navigation — Expo Router —

file-based, tab navigation, stack
Auth — Firebase Auth + custom
navigation, AsyncStorage

Payments — Razorpay

(Linking, openURL, browser,
AI/Scan — Google Gemini 2.0
checkout, + polling)

Charts & Reports — expo-print,

expo-sharing, html2canvas for
Biometrics — expo-local-
PDF health reports

Notifications — expo-

notifications (push notifications)

QR Code — react-native-qrcode-

expo (AORANE_ID, secretKey)

Wearable — Google Fit OAuth +

REST API

Build — Codemagic CI/CD !' APK

for Android, EAS for stores

🖥️ Business Portal & Admin Panel

Framework — React 19 + Vite 5

Language — TypeScript

Routing — Wouter (lightweight
client-side router)

UI Library — Shadcn/ui (Radix
UI primitives) + Tailwind CSS

Data Fetching — TanStack

Query (React Query) v5

HTTP Client — Axios (custom

API client with axios interceptors)

Animation — Framer Motion

Icons — Lucide React

Forms — React Hook Form +

Zod validation

Charts — Recharts

Auth — JWT stored in

localStorage, auto-refresh on 401

🌐 API Server (artifacts/api-server)

Runtime — Node.js (latest LTS)

Framework — Express.js v5

Language — TypeScript !'

compiled with esbuild (build.mjs)

ORM — Drizzle ORM v0.36 +

drizzle-kit for migrations

Database — PostgreSQL

(Supabase) — connection via
Auth — JWT (JSON web token) —
SUPABASE_DATABASE_URL

Password Hashing — bcryptjs

(12 rounds)

Logging — Pino + pino-http

(structured JSON logs)

Security — Helmet (HTTP

headers), express-rate-limit,

Email — Resend API
CORS with whitelist

(transactional emails — OTP,
welcome, etc.)

Validation — Zod schemas (auto-generated via Orval from OpenAPI spec)

Build — esbuild (single-file bundle) — 3.4 MB output

Database

Provider — Supabase (hosted

PostgreSQL on AWS)

ORM — Drizzle ORM — type-

safe queries, schema first

Connection — Transaction mode

connection pooling (port 6543) for

serverless-friendly connections

Migrations — drizzle-kit push

(schema sync) + drizzle-kit

UUIDs — gen_random_uuid() —

generate SQL migrations

Enums — 20+ PostgreSQL

enums for type safety

Database Schema — 32 Tables

Hosted on Supabase PostgreSQL. Managed via Drizzle ORM with type-safe schema definitions split across 8 schema files in `lib/db/src/schema/`.

Ø=Üd Users & Authentication (`lib/db/src/schema/users.ts`)

users — `id`, `phone`, `email`, `name`, `plan`(enum), `createdAt`, `updatedAt`
user_auth_providers — `id`, `userId`, `provider`(enum), `providerId`, `createdAt`, `updatedAt`
user_profiles — `id`, `userId`, `avatarId`(12-digit), `dob`, `gender`, `bloodGroup`, `height`, `weight`, `bmi`, `medicalConditions` — chronic
user_health_goals — `id`, `userId`, `goal` — `weight loss`, `muscle gain`, etc.
user_preferences — `id`, `userId`, `language`, `theme`, `units`, `notifications`
user_privacy_settings — `id`, `userId`, `shareHealthData`, `allowAnalytics`, `GDPRControls`
otp_store — `id`, `phone` (or 'email: ...'), `hashedOtp`, `expiresAt` —

Ø<BÄ Health Tracking (`lib/db/src/schema/health-tracking.ts`)

exercise_logs — `id`, `userId`, `type`, `duration`(min), `intensity`(enum), `createdAt`, `updatedAt`
water_logs — `id`, `userId`, `amount`(ml), `loggedAt`
medicine_schedules — `id`, `userId`, `medicineName`, `dosage`, `frequency`(enum), `scheduledAt`, `status` (taken/missed)
stress_logs — `id`, `userId`, `stressType`(ppg/mood/5pillar), `period` (enum), `notes`, `startDate`, `endDate`, `level` (enum)
medical_reports — `id`, `userId`, `reportType`, `fileUrl`, `aiSummary`, `daily_health_scores` — `id`, `userId`, `date`, `overallScore`, `foodScore`
daily_suggestions — `id`, `userId`, `date`, `suggestionText`, `category`,

Ø>ÝW Food Database (`lib/db/src/schema/health-food.ts`)

food_items — `id`, `name`, `nameHi`, `brand`, `calories`, `protein`, `carbs`, `fat`, `fiber`, `sodium`, `servingSize`, `imageUrl`, `foodName`
food_scan_cache — `id`, `userId`, `foodItemId`, `mealType`(enum), `servingSize`
food_logs — `id`, `userId`, `foodItemId`, `mealType`(enum), `servingSize`

Ø=Ü° Revenue (`lib/db/src/schema/revenue.ts`)

subscriptions — `id`, `userId`, `plan`, `status`(enum), `source`, `expiresAt`, `paymentType` (one time/recurring), `currentPlan`
promo_codes — `id`, `code`, `discountPct`, `isActive`, `expiresAt`, `usageCount`, `maxUsage`
referrals — `id`, `referrerId`, `referredId`, `code`, `status`, `badgeText`, `gradientColors`, `isActive`

Ø<B Business/Enterprise (lib/db/src/schema/business.ts)

organizations — id, name, type(corporate/hospital/gym/school/high/clinic/other), plan(basic/pro/recoveredHack, name, role(owner/manager/employee)
org_admins — id, orgId, email, recoveredHack, name, role(owner/manager/employee)
org_members — id, orgId, userId, enrolledVia(code/invite/admin), enrollment_codes — id, orgId, code, codeAvailable, usedCount
insurance_api_keys — id, orgId, provider, apiKey, isActive — for org_payments — id, orgId, insuranceIntegrations, amount, plan, code
org_announcements — id, orgId, title, message, targetRole,

Ø<B Platform & Admin (lib/db/src/schema/platform.ts)

push_tokens — id, userId, token, platform(ios/android/web), deviceId
notifications — id, userId, title, body, type(excm), isRead, date
announcements — id, title, content, targetAudience, isActive, featureFlags — id, key, isEnabled, description, rolloutPercent
ad_campaigns — id, title, imageUrl, targetUrl, type(google/direct/status), startDate, endDate, usedClicks
ad_impressions — id, addId, directly, status, startDate, endDate, usedClicks
ad_clicks — id, addId, userId, clickedAt
admin_users — id, email, recoveredHack, name, role
admin_audit_logs — id, adminId, action, target, details, ip, createdAt
ai_configs — id, adminId, model, description
company_settings — id, settingKey, settingValue — platform-enquiries — id, name, email, phone, subject, message
app_sessions — id, userId, deviceId, platform, appVersion,

Ø>Y Community (lib/db/src/schema/community.ts)

family_groups — id, ownerId, inviteCode, maxMembers(4), **family_members** — id, groupId, userId, role(owner/member)
blood_donors — id, userId, bloodGroup, city, state, isAvailable,
blood_emergency_requests — id, requestedId, bloodGroup, lastDonatedAt
blood_emergency_responses — id, requestId, donorId, status(detected/confirmed/expired/panicAlarmCanHelpLater)
blood_donations — id, donorId, recipientId, donatedAt, units
accident_emergency_logs — id, userId, status(detected/confirmed/expired/panicAlarmCanHelpLater), location, lat, name, phone, relation, isPrimary
emergency_contacts — id, userId, status(detected/confirmed/expired/panicAlarmCanHelpLater), location, lat, name, phone, relation, isPrimary

Wearable & i18n (lib/db/src/schema/wearable.ts + whatsapp.ts)

wearable_connections — id, userId, provider(google_fit/apple_healthkit), accessToken, **wearable_data** — id, userId, provider, dataType(steps/heartRate/weight)
offline_queue — id, userId, endpoint, payload, retries, **languages** — id, code, nativeName, name, nativeName, isActive

translations — id, languageId, key,
value — i18n string translations
**whatsapp_subscriptions (in
whatsapp.ts)** — id, userId, phone,
isSubscribed, subscribedAt,
unsubscribedAt

API Routes — All 26 Modules

Base URL: <https://aorane.onrender.com/api> | Auth: Bearer JWT (user), Bearer JWT (admin), Bearer JWT (business)

All routes return JSON. Error responses: { error: "message" }. Success responses: { success: true, ...data }

/auth — Authentication

Method	Endpoint	Description	Auth
POST	/auth/send-otp	Send OTP via SMS (Fast2SMS)	Public
POST	/auth/send-otp-whatsapp	Send OTP via WhatsApp	Public
POST	/auth/verify-otp	Verify phone OTP !' JWT token	Public
POST	/auth/send-email-otp	Send OTP via email (Resend)	Public
POST	/auth/verify-email-otp	Verify email OTP !' JWT token	Public
POST	/auth/firebase-login	Login via Firebase ID token	Public
POST	/auth/google	Google OAuth login	Public
POST	/auth/pin/set	Set 4-digit PIN for quick login	Auth
POST	/auth/pin/login	Login with phone + PIN !' JWT	Public
POST	/auth/refresh	Refresh JWT token	Public
GET	/auth/me	Get current authenticated user	Auth
POST	/auth/logout	Logout (invalidate session)	Auth

/users — User Profile

Method	Endpoint	Description	Auth
GET	/users/profile	Get full user profile	Auth
PATCH	/users/profile	Update name, photo, city, state, etc.	Auth
PATCH	/users/onboarding/step	Mark onboarding step complete	Auth
GET	/users/preferences	Get notification/theme/language prefs	Auth
PATCH	/users/preferences	Update preferences	Auth
GET	/users/privacy	Get privacy settings	Auth
PATCH	/users/privacy	Update privacy settings	Auth
GET	/users/scorecard	Get AORANE ID health scorecard (QR data)	Auth
GET	/users/activity-score	Get daily activity percentage breakdown	Auth
GET	/users/search	Search users (admin use)	Auth

/food — Food Tracking & AI Scan

Method	Endpoint	Description	Auth
GET	/food/search	Search food DB (Indian food items)	Auth
POST	/food/logs	Log food eaten	Auth
GET	/food/logs	Get food logs for date range	Auth
DELETE	/food/log/:id	Delete a food log entry	Auth
GET	/food/summary/:date	Get daily macro/calorie summary	Auth
GET	/food/favorites	Get frequently eaten foods	Auth

GET	/food/history-search	Search food log history	Auth
GET	/food/db-stats	Food DB statistics (admin)	Auth
GET	/food/cache	AI food scan cache list (admin)	Admin
POST	/food/cache/:id/promote	Promote scan cache to DB item (admin)	Admin
POST	/food/cache/:id/reject	Reject scan cache entry (admin)	Admin
GET	/food/cache/export	Export food cache CSV (admin)	Admin

/health — Health Tracking

Method	Endpoint	Description	Auth
POST	/health/exercise	Log exercise session	Auth
GET	/health/exercise	Get exercise logs	Auth
POST	/health/water	Log water intake	Auth
GET	/health/water/:date	Get water intake for date	Auth
GET	/health/score/:date	Get daily health score	Auth
GET	/health/scores/history	Health score history (chart data)	Auth
GET	/health/weekly-activity	Weekly activity summary	Auth
GET	/health/intelligence/predict	AI health prediction	Auth
GET	/health/intelligence/diet-chart	AI-generated diet chart	Auth
GET	/health/intelligence/exercise/met	MET values for exercise types	Public

/medicine — Medicine Management

Method	Endpoint	Description	Auth
POST	/medicine/schedules	Create medicine schedule/reminder	Auth
GET	/medicine/schedules	Get all medicine schedules	Auth
PATCH	/medicine/schedule/:id	Update schedule (dosage, timing)	Auth
DELETE	/medicine/schedule/:id	Delete medicine schedule	Auth
POST	/medicine/logs	Log medicine taken/skipped	Auth
GET	/medicine/logs	Get medicine adherence logs	Auth

/ai — AI Intelligence

Method	Endpoint	Description	Auth
POST	/ai/smart-scan	Gemini Vision: scan food/medicine/report photo	Auth
POST	/ai/diet-plan	NVIDIA LLaMA: generate personalized diet plan	Auth
POST	/ai/meal-swap	NVIDIA LLaMA: suggest meal substitution	Auth
POST	/ai/health-tip	AI-generated daily health tip	Auth

/payment — Razorpay Payments

Method	Endpoint	Description	Auth
POST	/payment/order	Create Razorpay one-time payment order	Auth
POST	/payment/verify	Verify payment signature 'I' activate plan	Auth
GET	/payment/order-status	Poll order status (for native app)	Auth
GET	/payment/subscription	Get current subscription status	Auth
POST	/payment/subscription/create	Create auto-recurring subscription	Auth
POST	/payment/subscription/verify	Verify first subscription payment	Auth

DELETE	/payment/subscription/cancel	Cancel auto-renew subscription	Auth
POST	/payment/promo/validate	Validate promo code	Auth
POST	/payment/rzp-callback	Razorpay browser checkout callback (HTML response)	Public
GET	/payment/rzp-callback	Razorpay cancel redirect (HTML response)	Public

/business — B2B Enterprise

Method	Endpoint	Description	Auth
POST	/business/register	Register new organization	Public
POST	/business/login	Business admin login	Public
GET	/business/me	Get current business profile	BizAuth
GET	/business/overview	Dashboard stats (members, usage, health)	BizAuth
GET	/business/members	List org members with health data	BizAuth
GET	/business/members/:userId/detail	Individual member health detail	BizAuth
GET	/business/analytics	Engagement & health analytics	BizAuth
GET	/business/health-analytics	Aggregated member health metrics	BizAuth
GET	/business/enrollment-codes	List enrollment codes	BizAuth
POST	/business/enrollment-codes	Generate new enrollment code	BizAuth
GET	/business/billing/subscription	Current billing subscription	BizAuth
GET	/business/billing/plans	Available org plans	BizAuth
GET	/business/billing/invoices	Invoice history	BizAuth
GET	/business/announcements	List announcements sent to members	BizAuth
PATCH	/business/settings	Update org name, description, logo	BizAuth

/admin — Admin Panel

Method	Endpoint	Description	Auth
POST	/admin/login	Admin staff login (email + password)	Public
GET	/admin/me	Get admin profile	Admin
GET	/admin/overview	Platform dashboard (users, revenue, DAU)	Admin
GET	/admin/users	List all users with filters	Admin
PATCH	/admin/users/:id	Ban/unban user, change plan	Admin
GET	/admin/users/search	Search users	Admin
GET	/admin/organizations	List all organizations	Admin
GET	/admin/subscriptions	All subscriptions list	Admin
POST	/admin/subscriptions/grant	Grant free premium to user	Admin
GET	/admin/revenue	Revenue breakdown & charts	Admin
GET	/admin/analytics	Platform analytics	Admin
GET	/admin/plan-pricing	Get all plan prices	Admin
POST	/admin/plan-pricing/reset	Reset plans to defaults	Admin
GET	/admin/promo-codes	List all promo codes	Admin
POST	/admin/promo-codes	Create new promo code	Admin
GET	/admin/feature-flags	List feature flags	Admin
PATCH	/admin/feature-flags/:key	Enable/disable feature flag	Admin
POST	/admin/feature-flags	Create feature flag	Admin
GET	/admin/audit-logs	Admin action audit trail	Admin
GET	/admin/announcements	List announcements	Admin
POST	/admin/announcements	Create announcement to users	Admin

GET	/admin/support-tickets	List support tickets	Admin
PATCH	/admin/support-tickets/:id	Update ticket status	Admin
GET	/admin/enquiries	List enquiries (B2B leads)	Admin
PATCH	/admin/enquiries/:id	Update enquiry status	Admin
DELETE	/admin/enquiries/:id	Delete enquiry	Admin
GET	/admin/ads	List ad campaigns	Admin
POST	/admin/ads	Create ad campaign	Admin
PATCH	/admin/ads/:id/toggle	Pause/activate ad	Admin
DELETE	/admin/ads/:id	Delete ad	Admin
GET	/admin/ai-config	Get AI model configuration	Admin
GET	/admin/food-items	List curated food items	Admin
POST	/admin/food-items	Add food item to DB	Admin
GET	/admin/whatsapp/config	WhatsApp channel config	Admin
GET	/admin/blood-requests	All blood emergency requests	Admin
PATCH	/admin/blood-requests/:id	Update request status	Admin
GET	/admin/languages	List supported languages	Admin
POST	/admin/languages	Add new language	Admin

/blood, /family, /stress, /period, /medical, /emergency, /wearable, /suggestions, /sessions, /support, /whatsapp, /ads, /plans

Method	Endpoint	Description	Auth
GET/POST	/blood/donors	Register as blood donor	Auth
GET	/blood/requests/active	Active blood requests in your city	Auth
POST	/blood/request	Create emergency blood request	Auth
GET/POST	/family/group	Get or create family group (4 members max)	Auth
POST	/family/join	Join family group via invite code	Auth
DELETE	/family/leave	Leave family group	Auth
GET/POST	/stress/logs	Log and retrieve stress assessments	Auth
GET	/stress/today	Today's stress summary	Auth
GET	/stress/weekly	Weekly stress trend	Auth
GET/POST	/period/logs	Menstrual cycle tracking	Auth
GET/POST	/medical/reports	Upload medical reports (Gemini AI analysis)	Auth
GET/POST	/emergency/contacts	Emergency contacts management	Auth
POST	/emergency/accident	Report accident/SOS trigger	Auth
GET/POST	/wearable/connections	Connect/list wearable devices	Auth
GET	/wearable/oauth/google-fit/url	Get Google Fit OAuth URL	Auth
GET	/wearable/data	Get synced wearable data	Auth
GET	/suggestions/daily	Get personalized daily suggestions	Auth
GET	/sessions/me	Get my app sessions	Auth
GET	/support/tickets/mine	My support tickets	Auth
POST	/support/tickets	Submit support ticket	Auth
GET	/whatsapp/status	WhatsApp integration status	Public
POST	/whatsapp/subscribe	Subscribe to WhatsApp health tips	Auth
GET	/ads/active	Get active ad campaigns for user	Auth
GET	/plans	Get all plan pricing	Public
GET	/health	API health check	Public

Mobile App — Screens & Features

Framework: Expo 52 (SDK 52) + React Native + Expo Router | Build: Codemagic CI/CD !' APK + EAS

App Structure: File-based routing with groups: (auth), (onboarding), (tabs), and standalone screens

App Screen Directory

🔑 Authentication Flow (app/(auth)/)

login.tsx — Multi-mode login screen — Phone OTP, Email OTP, Google Sign-In. Switches between modes. Handles new vs returning users.

verify-otp.tsx — OTP entry screen (6-digit for phone, 6-digit for email). Auto-submit on completion. Resend timer (60s).

setup-pin.tsx — After first login, user creates 4-digit PIN for future quick login.

verify-pin.tsx — PIN entry screen for returning users. Supports fingerprint/Face ID via expo-local-authentication. Option to login via OTP instead.

🏠 Onboarding Flow (app/(onboarding)/)

index.tsx — Onboarding welcome / intro screen with Aorane brand animation.

physical.tsx — Collect height, weight, DOB, gender, blood group !' auto-calculates BMI + AORANE ID.

health.tsx — Select chronic conditions (diabetes, hypertension, thyroid, PCOD, etc.) + health goals.

lifestyle.tsx — Food preference (veg/non-veg/vegan/jain), activity level, daily schedule.

goals.tsx — Set primary health goals (weight loss, muscle gain, manage disease, stay healthy, etc.).

permissions.tsx — Request notification permission, health data access, location access (for blood requests).

☐=Üñ Main Tabs (app/(tabs)/)

dashboard.tsx — Home screen
— Daily health score ring, today's macro summary, water tracker, quick action cards (food log, exercise, medicine, scan), AI suggestions carousel, weather-based tips, active plan badge.

food.tsx — Food tracking — Search Indian food DB, log meals (breakfast/lunch/dinner/snacks), view daily macros (calories/protein/carbs/fat), food log history with timestamps.

scan.tsx — AI Smart Scan — Camera/gallery photo !' Gemini 2.0 Flash Vision !' identifies food, nutrition info, medicines, medical reports. Shows confidence score. One-tap add to food log.

exercise.tsx — Exercise log — Select exercise type (walking, running, yoga, gym, cycling, swimming, etc.), set duration & intensity !' auto-calculates calories burned. View weekly activity chart.

medicine.tsx — Medicine management — Create schedules with dosage, frequency (daily/alternate/weekly), meal timing, start/end date. Daily medicine reminder cards. Mark as taken/skipped. Adherence streak.

profile.tsx — User profile — AORANE ID display, current plan badge, health stats (BMI, blood group, age), notifications settings, manage subscriptions, settings, help, logout.

☐<ß Standalone Screens (app/)

upgrade.tsx — Premium upgrade screen — Plan comparison cards (Max/Pro), promo code entry, Razorpay payment (web SDK or browser checkout), success overlay with family invite code for Family plan.

health-report.tsx — AI-generated PDF health report — Weekly/monthly summary, charts, scores. Export via expo-sharing.

intelligence.tsx — AI Health Intelligence hub — Personalized diet chart (NVIDIA LLaMA), meal swap suggestions, health predictions, weather-based activity tips.

scorecard.tsx — AORANE ID Scorecard — QR code, health grade (A+/B/C etc.), key metrics, shareable digital health card.

family.tsx — Family plan management — View family members, their health scores, invite code sharing, member health summaries.

blood.tsx — Blood donation — Register as donor, search donors by blood group/city, create/view emergency blood requests.

stress.tsx — Stress assessment — 5-pillar mood check, weekly stress trend chart, breathing exercise prompts.

period.tsx — Menstrual health — Cycle tracker, symptom logging, next period prediction, cycle analytics.

medical-emergency.tsx — SOS / Accident emergency — Trigger alert, GPS location capture, notify emergency contacts, status tracking.

water.tsx — Detailed water tracker — Set daily goal, log intake with cup sizes, progress ring, reminders.

wearable.tsx — Google Fit integration — Connect via OAuth, sync steps/calories, view wearable data timeline.

suggestions.tsx — Daily AI suggestions — Personalized tips for food, exercise, water, medicine, stress.

edit-profile.tsx — Edit personal info — Name, photo, city, state, emergency contacts.

edit-work-profile.tsx — Work profile — Company/organization, work type, sitting hours (affects calorie calc).

notification-settings.tsx — Manage push notifications — Medicine reminders, health tips, water reminders, weekly reports.

help.tsx — Help & support — FAQ accordion, submit support ticket, WhatsApp chat option.

Admin Panel — Pages & Features

URL: Separate Render deployment | Login: superadmin@aorane.in | Auth: JWT (7-day expiry) | Stack: React 19 + Vite + Wouter + Shadcn/ui + TanStack Query

Page	Description
Login.tsx	Admin login with email + password. JWT stored in localStorage. Auto-redirect if already logged in.
Dashboard.tsx	Main overview — Total users, active subscriptions, monthly revenue cards. Quick action links. Bell notification icon showing new enquiries with badge count. Recent activity.
Users.tsx	User management table — Search, filter by plan/status, view user details, change plan, ban/unban users. Paginated list.
Organizations.tsx	B2B organization list — Name, type, plan, seat usage, verification status, active/inactive toggle.
Subscriptions.tsx	All subscription records — Filter by plan/status, grant free premium, cancel subscriptions, export CSV.
Revenue.tsx	Revenue analytics — Monthly/annual revenue chart, plan-wise breakdown, payment success rate, refund tracking.
Analytics.tsx	Platform analytics — DAU/MAU trend, feature usage, onboarding completion rate, food scan frequency.
PlanPricing.tsx	Manage plan prices for Individual (Free/Max/Pro/Family) and Organization (Starter/Growth/Enterprise) plans. Edit prices, features list, badge colors. Reset to defaults.
PromoCodes.tsx	Promo code manager — Create codes (percentage discount, expiry, max usage), view usage stats, toggle active/inactive.
Enquiries.tsx	B2B lead management — View contact form submissions, update status (New/Contacted/Resolved), delete old enquiries.
Invoices.tsx	Organization invoice list — Filter by org/month, view payment amounts, download invoice PDFs.
AuditLogs.tsx	Admin action audit trail — All admin actions logged (who did what, when, from which IP).
FeatureFlags.tsx	Feature toggle management — Enable/disable platform features (AI scan, wearable, WhatsApp, etc.) with rollout percentage control.
AIConfig.tsx	AI model configuration — Set NVIDIA model ID, temperature, max tokens, Gemini model selection, custom prompts.
AIFoodDiscovery.tsx	AI food scan cache review — View Gemini-identified foods not yet in DB. Approve '!' promotes to food_items. Reject '!' removes from cache.
FoodItems.tsx	Curated food DB management — Add/edit Indian food items with full nutritional data.
Announcements.tsx	Create platform announcements to all users or specific segments (by plan, platform, etc.).
SupportTickets.tsx	Support ticket queue — View all user tickets, update status (Open/In-Progress/Resolved), add internal notes.
AdsManager.tsx	Ad campaign management — Create/edit banner ads (Google/direct), set budget, start/end dates, view impressions & clicks.
BloodRequests.tsx	Blood emergency request management — View active requests, update status (Fulfilled/Expired), contact requesters.
Languages.tsx	Language management — Add/edit supported app languages and translation strings.
PlatformCosts.tsx	Platform cost tracking — Log and view infrastructure costs (API, hosting, SMS, email) for P&L.
Profile.tsx	Admin profile — Change name, update password.
Branding.tsx	Company branding settings — Logo, colors, company info for platform customization.
UpcomingFeatures.tsx	Roadmap / upcoming features preview page for internal reference.

Business Portal (B2B CRM)

Target users: HR managers, corporate wellness leads, gym/hospital/clinic admins. | Auth: Separate JWT for org_admins table.

Stack: React 19 + Vite + Wouter + Shadcn/ui + TanStack Query + Recharts | Onboarding: Register !' Email verify !' Dashboard

Page	Description
Landing.tsx	B2B product landing page — Features showcase, pricing tiers (Starter/Growth/Enterprise), "Get Started" CTA, testimonials section, comparison table vs competitors.
Register.tsx	Organization registration — Company name, type (Corporate/Hospital/Gym/School/NGO/Clinic), contact email, phone, city. Auto-sends verification email via Backend.
Verify.tsx	Email verification page — Confirm org email via token in URL. After verification, redirects to login.
Login.tsx	Business admin login — Email + password. JWT stored in localStorage. Forgot password flow.
AuthRedirect.tsx	Handles OAuth redirects and session restoration after page refresh.
Dashboard.tsx	Organization overview — Total members, active members, avg health score card, plan usage (seats used/total), enrollment code quick-copy, recent member activity feed, health score
Members.tsx	Member management — List all enrolled members with search/filter. View health summary (BMI, health score, last active). Suspend/reactivate members. Export member list CSV.
Analytics.tsx	Health analytics — Avg BMI trend, health score distribution histogram, feature usage breakdown (food/everice/medicine adherence), monthly engagement chart, top health
EnrollmentCodes.tsx	Manage enrollment codes — Generate codes, set seat count & expiry. View which members joined via each code. QR code for easy sharing.
Billing.tsx	Billing & subscription — Current plan, seats, next renewal date. Upgrade plan. Payment history table. Razorpay integration for org plan payments.
Communications.tsx	Send announcements to all members or specific segments — with title, body, expiry date.
Settings.tsx	View past announcements and read rates. Organization settings — Company name, logo, description, industry type, contact details. Admin password change.

B2B Enrollment Flow

Organization Plan Types

Plan	Target	Key Features
Starter	Small teams ("d50)	Basic member management, enrollment codes, basic health analytics
Growth	Mid-size ("d200)	Advanced analytics, health score reports, communications module, CSV export
Enterprise	Large orgs (500+)	Custom seats, insurance integration, dedicated support, custom branding, API access

Authentication & Security

Multi-Layer Authentication System

Mobile OTP (Phone) — Fast2SMS

API !' 6-digit OTP !' stored as bcrypt

Email OTP stored as bcrypt

OTP issued (30-day expiry)

WhatsApp OTP — WhatsApp

Business API !' OTP sent as

Google OAuth message for user sign up!

WhatsApp OTP !' backend verifies

Firestore Auth — Firestore SDK !' ID

token !' /auth/firebase-login !' backend

4-digit PIN Login — JWT issued

user sets 4-digit PIN. PIN hashed

Business Admin Auth — Email +

bcrypt password !' separate JWT for

authentication for biometric gating.

Admin Panel Auth — Email +

bcrypt password !' separate JWT for

admin_users table. Token contains

admin_id + role (superadmin/admin/

staff).

Payment System (Razorpay)

Payment Flows

Razorpay LIVE mode is required — detected via RAZORPAY_KEY_ID starting with "rzp_live_". If test keys, one-time payments return 503. Subscription in test mode is simulated (no real charge).

Flow A: One-Time Payment (Mobile APK Native)

AI Integration — NVIDIA + Google Gemini

AI Models & Use Cases

NVIDIA LLaMA 3.3 70B Instruct

Provider: NVIDIA API (api.nvidia.com)
Key: NVIDIA_API_KEY secret
Max Tokens: Configurable via ai_config DB

- Use Cases:
- Personalized diet plan generation
 - Meal swap suggestions
 - Daily health tips (text)
 - Stress management advice
 - Exercise recommendations
 - AORANE health intelligence predictions
 - Language: Hindi + English responses

Google Gemini 2.0/2.5 Flash

Provider: Google AI Studio API
Key: Configured via ai_config table
Vision: Yes (multimodal)

- Use Cases:
- Food photo scanning !' nutrition data
 - Medical report image analysis
 - Medicine packaging scan !' drug info
 - Barcode/label recognition
 - Multi-language nutrition label reading
 - Health report AI summarization

AI Smart Scan — Food Detection Pipeline

Stage	Description
User Input	Photo from camera or gallery !' sent as base64 to /ai/smart-scan
Image Hash	SHA-256 hash of image computed !' checked against food_scan_cache table for deduplication
Cache Hit	If hash found in cache !' return cached nutrition data instantly (no AI call = cost saving)
Cache Miss	If not in cache !' image sent to Gemini 2.0 Flash Vision with prompt
AI Response	Gemini returns: food name, nutrition per 100g/serving, confidence score, Hindi name
Cache Write	Result stored in food_scan_cache with imageHash, nutritionJson, confidence
Admin Review	Admin can promote cache items to food_items (permanent DB) or reject low-quality scans
User Action	User sees nutrition !' can add to food log with serving size

AORANE ID & Health Scorecard

Every user gets a permanent 12-digit AORANE ID generated from their profile data. The ID is immutable once set. Health Grade is computed using a weighted scoring formula:

Metric	Calculation
Food Score (25%)	Calorie adherence % + macro balance + meal frequency
Water Score (20%)	Daily water intake vs. goal (weight-adjusted)
Exercise Score (25%)	Minutes active, intensity, WHO 150min/week benchmark
Medicine Score (15%)	Adherence rate for scheduled medicines
Stress Score (15%)	Inverse of stress level (lower stress = higher score)
Health Grade	Overall weighted score !' Grade: A+ (90-100), A (80-89), B (70-79), C (60-69), D (<60)

Deployment & Infrastructure

Production URLs & Services

Component	Platform	URL	Deploy Trigger	Notes
API Server	Render.com	https://aorane.onrender.com/api	Auto-deploy from GitHub main branch	Web Service, 512MB RAM, Auto-sleep off
Admin Panel	Render.com	https://aorane-admin.onrender.com	Auto-deploy from GitHub main branch	Static site or Node server
Business Portal	Vercel / Render	TBD (configured in vercel.json)	Auto-deploy on push	Static site
Landing Page	Vercel / Render	TBD	Auto-deploy on push	Static site
Database	Supabase	PostgreSQL (Connection Pooler: port 6543)	Managed, auto-backup, point-in-time recovery	Transaction pooling mode
Mobile APK	Codemagic CI/CD	APK download link (Codemagic artifacts)	Triggered on git push to main	Android APK build, EAS for app store
GitHub Repo	GitHub	github.com/Mangesh-a-verma/Health-Data-Hub	main branch = production	Auto-triggers Render & Codemagic deploys

Quick Reference Card

API Base URLs

Development	http://localhost:8080/api
Production	https://aorane.onrender.com/api
Health Check	https://aorane.onrender.com/api/health

Default Credentials (Development Only)

Admin Panel Login	superadmin@aorane.in / admin123
Business Portal	Register new org or use test account
Mobile App	Any phone number (OTP via Fast2SMS)
DB Access	Via Supabase dashboard !' Project !' Database

GitHub Repository

Repo	github.com/Mangesh-a-verma/Health-Data-Hub
Branch	main (auto-deploys to Render)
Packages	pnpm workspaces — run commands with --filter @workspace/ PACKAGE

Common Development Commands

Task	Command
Start API Server	pnpm --filter @workspace/api-server run dev
Start Admin Panel	pnpm --filter @workspace/admin-panel run dev
Start Business Portal	pnpm --filter @workspace/business-portal run dev
Start Landing Page	pnpm --filter @workspace/aorane-landing run dev
Start Mobile App	cd artifacts/aorane-mobile && npx expo start
Push DB Schema	pnpm --filter @workspace/db run push (or db:push)
Generate Migrations	pnpm --filter @workspace/db run generate
TypeScript Check	cd artifacts/PACKAGE && npx tsc --noEmit --skipLibCheck
Install All Deps	pnpm install (from workspace root)

Key Files Reference

Path	Description
lib/db/src/schema/	All 8 schema files — DB table definitions
artifacts/api-server/src/routes/modules/	26 route module files
artifacts/api-server/src/lib/razorpay.ts	Razorpay payment helper functions
artifacts/api-server/src/middlewares/	Auth middleware (user-auth, business-auth, admin-auth)
artifacts/aorane-mobile/lib/api.ts	Mobile API client — all API call methods
artifacts/aorane-mobile/context/AuthContext.tsx	Global auth state management
artifacts/aorane-mobile/app/upgrade.tsx	Payment screen with Razorpay integration
artifacts/admin-panel/src/lib/api.ts	Admin panel API client
artifacts/business-portal/src/lib/api.ts	Business portal API client

render.yaml

Render deployment configuration

pnpm-workspace.yaml

Tech Stack Summary

Layer	Technologies
Mobile	Expo 52 + React Native + TypeScript + Expo Router
Web Portals	React 19 + Vite 5 + Wouter + Shadcn/ui + Tailwind v4 + TanStack Query
Backend	Node.js + Express.js v5 + TypeScript + esbuild
Database	Supabase PostgreSQL + Drizzle ORM
AI	NVIDIA LLaMA 3.3 (text) + Google Gemini 2.0 Flash (vision)
Payments	Razorpay (one-time + subscriptions)
Email	Resend API
SMS/OTP	Fast2SMS
Auth	JWT + Firebase + bcryptjs
Deployment	Render.com (API) + Codemagic (APK) + Vercel/Render (web)
Repository	GitHub (pnpm monorepo)
